

Asterisk Business Edition

Asterisk Business Edition™ is a professional grade version of Digium's acclaimed open source PBX and VoIP platform for the Linux operating system.

This version adds tested reliability of critical functions and features, tailored for small and medium sized business applications. A new technical manual, installer, and quick start documentation supplement the package, making Asterisk even easier to install, configure and use. Asterisk Business Edition is backed by Digium's professional support team for one full year. This provides enterprise environments with a PBX and telephony platform suitable for critical business applications.

Digium's comprehensive test program ensures Asterisk Business Edition's reliability, performance and interoperability with key hardware, software and protocols. Digium hardware is tested for full compatibility with Asterisk Business Edition, as are selected models of servers, VoIP, TDM devices. All major software features in Asterisk Business Edition are thoroughly tested for functionality and reliability. Test bed systems have been subjected to extreme stress conditions using Empirix™ test equipment to simulate hundreds of thousands of calls in various real world combinations and configurations.

As a result, customers can rely on their combination of proven Asterisk software and Digium hardware to work together to provide feature rich PBX or VoIP systems.

Asterisk Business Edition includes:

- Asterisk Business Edition binaries, drivers, installer and scripts on CD ROM
- All new Asterisk Technical manual
- Quick Start guide
- Authentication key for activation and support
- Special offers and discounts for Digium and its partner companies.

Asterisk Business Edition supports up to 120 simultaneous calls. Upgrades available to allow for up to 240 calls.
